CM1230

2, 4, and 8-Channel Low-Capacitance ESD Protection Array

Product Description

The CM1230 is a family of 2, 4 and 8 channel, very low capacitance ESD protection diode arrays in a CSP form factor. It is ideal for protecting systems with high data and clock rates or for circuits that need low capacitive loading. Each channel consists of a pair of ESD diodes that act as clamp diodes to steer ESD current pulses to either the positive or negative supply rail. A Zener diode is integrated between the positive and negative supply rails. The V_{CC} rail is protected from ESD strikes and eliminates the need for a bypass capacitor to absorb positive ESD strikes to ground. Each channel can safely dissipate ESD strikes of ± 8 kV, meeting the Level 4 requirement of the IEC61000-4-2 international standard as well as ± 15 kV air discharges per the IEC61000-4-2 specification. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the pins are protected for contact discharges at greater than ± 15 kV.

This device is well-suited for next generation wireless handsets that implement high-speed serial interface solutions for the LCD display and camera interfaces. In these designs, a tolerance above 1.5 pF cannot be tolerated when high data rates are transferred between the baseband chip and the LCD driver/controller ICs. Higher capacitive loading normally causes the rise and fall times to slow which hampers the functionality of circuit and operation of the wireless handset. The CM1230 incorporates *OptiGuard*™ which results in improved reliability at assembly. The CM1230 is available in a space-saving, low profile Chip Scale Package with RoHS-compliant, lead-free finishing.

Features

- Two, Four, and Eight Channels of ESD Protection
- Provides ESD Protection to IEC61000-4-2 Level 4 ± 8 kV Contact Discharge & ± 15 kV Air Discharge
- Low Loading Capacitance of 0.8 pF Typical
- Minimal Capacitance Change with Temperature and Voltage
- Channel I/O to GND Capacitance Difference of 0.02 pF Typical is Ideal for Differential Signals
- Channel I/O to I/O Capacitance 0.15 pF Typical
- Zener Diode Protects Supply Rail and Eliminates the Need for External Bypass Capacitors
- Each I/O Pin Can Withstand Over 1000 ESD Strikes*
- Available in 4, 6 and 10 Bump Chip Scale Packages (CSP)
- *OptiGuard*™ Coated for Improved Reliability at Assembly
- These Devices are Pb-Free and are RoHS Compliant

Applications

- I/O Port Protection for Mobile Handsets, Notebook Computers, DSCs, MP3 Players, PDAs, etc. Including USB, 1394 and Serial ATA
- LCD and Camera Data Lines in Wireless Handsets that use High-speed Serial Interfaces
- Wireless Handsets
- Handheld PCs/PDAs
- LCD and Camera Modules

*Standard test condition is IEC61000-4-2 level 4 test circuit with each (A_{OUT}/B_{OUT}) pin subjected to ± 12 kV contact discharge for 1000 pulses. Discharges are timed at 1 second intervals and all 1000 strikes are completed in one continuous test run.

1. CM1230-02CP and CM1230-J2CP are the same mechanical package. Only difference is the Pin 1 orientation ('+' mark) on the tape and reel.
