ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at
www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FAIRCHILD SEMICONDUCTOR®

January 2013

FAN7389
3-Phase Half-Bridge Gate-Drive IC

Features

- Floating Channel for Bootstrap Operation to +600 V
- Typically 350 mA/650 mA Sourcing/Sinking Current Driving Capability for All Channels
- Extended Allowable Negative V_S Swing to -9.8 V for Signal Propagation at V_{DD}=V_{BS}=15 V
- Output In-Phase with Input Signal
- Over-Current Shutdown Turns off All Six Drivers
- Matched Propagation Delay for All Channels
- 3.3 V and 5.0 V Input Logic Compatible
- Adjustable Fault-Clear Timing
- Built-in Advanced Input Filter
- Built-in Shoot-Through Prevention Logic
- Built-in Soft Turn-Off Function
- Common-Mode dv/dt Noise Canceling Circuit
- Built-in UVLO Functions for All Channels

Applications

- 3-Phase Motor Inverter Driver
- Air Conditioners
- Washing Machines
- General-Purpose Three-Phase Inverters

Description

The FAN7389 is a monolithic three-phase half-bridge gate-drive IC designed for high-voltage, high-speed driving MOSFETs and IGBTs operating up to +600 V.

Fairchild's high-voltage process and common-mode noise canceling technique provide stable operation of high-side drivers under high-dv/dt noise circumstances.

An advanced level-shift circuit allows high-side gate driver operation up to V_S = -9.8 V (typical) for V_{BS} =15 V.

The protection functions include under-voltage lockout and inverter over-current trip with an automatic fault-clear function.

Over-current protection that terminates all six outputs can be derived from an external current-sense resistor. An open-drain fault signal is provided to indicate that an over-current or under-voltage shutdown has occurred.

The UVLO circuits prevent malfunction when V_{DD} and V_{BS} are lower than the specified threshold voltage.

Output drivers typically source and sink 350 mA and 650 mA, respectively; which is suitable for three-phase half-bridge applications in motor drive systems.

28-SOIC

Ordering Information

Part Number	Package	Operating Temperature	Packing Method
FAN7389MX1[(1)]	28-Lead, Small Outline Integrated Circuit Wide Body (SOIC)	-40 to +125°C	Tape & Reel

Note:
1. These devices passed wave soldering test by JESD22A-111.

Pin Configuration

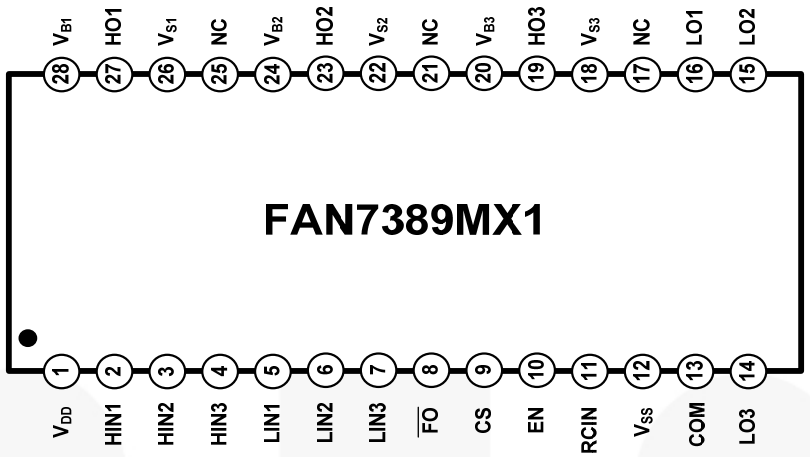

Figure 3. Pin Configuration

Pin Definitions

Pin	Name	Description
1	V_{DD}	Logic and low-side gate driver power supply voltage
2	HIN1	Logic Input 1 for high-side gate 1 driver
3	HIN2	Logic Input 2 for high-side gate 2 driver
4	HIN3	Logic Input 3 for high-side gate 3 driver
5	LIN1	Logic Input 1 for low-side gate 1 driver
6	LIN2	Logic Input 2 for low-side gate 2 driver
7	LIN3	Logic Input 3 for low-side gate 3 driver
8	$\overline{FO}$	Fault output with open drain (indicates over-current and low-side under-voltage)
9	CS	Analog input for over-current shutdown
10	EN	Logic input for shutdown functionality
11	RCIN	An external RC network input used to define the fault-clear delay
12	V_{SS}	Logic ground
13	COM	Low-side driver return
14	LO3	Low-side gate driver 3 output
15	LO2	Low-side gate driver 2 output
16	LO1	Low-side gate driver 1 output
17, 21, 25	NC	No connect
18	V_{S3}	High-side driver 3 floating supply offset voltage
19	HO3	High-side driver 3 gate driver output
20	V_{B3}	High-side driver 3 floating supply
22	V_{S2}	High-side driver 2 floating supply offset voltage
23	HO2	High-side driver 2 gate driver output
24	V_{B2}	High-side driver 2 floating supply
26	V_{S1}	High-side driver 1 floating supply offset voltage
27	HO1	High-side driver 1 gate driver output
28	V_{B1}	High-side driver 1 floating supply

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. T_A=25°C, unless otherwise specified.

Symbol	Parameter	Min.	Max.	Unit
V_S	High-Side Floating Offset Voltage	$V_{B1,2,3}$-25.0	$V_{B1,2,3}$+0.3	V
V_B	High-Side Floating Supply Voltage	-0.3	625.0	V
V_{DD}	Low-Side and Logic-Fixed Supply Voltage	-0.3	25.0	V
V_{HO}	High-Side Floating Output Voltage $V_{HO1,2,3}$	$V_{S1,2,3}$-0.3	$V_{B1,2,3}$+0.3	V
V_{LO}	Low-Side Floating Output Voltage $V_{LO1,2,3}$	-0.3	V_{DD}+0.3	V
V_{IN}	Input Voltage (HINx, LINx, CS, and EN)	-0.3	5.5	V
V_{FO}	Fault Output Voltage ($\overline{FO}$)	-0.3	V_{DD}+0.3	V
PW_{HIN}	High-Side Input Pulse Width	500		ns
dV_S/dt	Allowable Offset Voltage Slew Rate		±50	V/ns
P_D	Power Dissipation[2,3,4]		1.4	W
θ_{JA}	Thermal Resistance		70	°C/W
T_J	Junction Temperature		150	°C
T_{STG}	Storage Temperature	-55	150	°C

Notes:

2. Mounted on 76.2 x 114.3 x 1.6 mm PCB (FR-4 glass epoxy material).
3. Refer to the following standards:
   JESD51-2: Integral circuits thermal test method environmental conditions - natural convection
   JESD51-3: Low effective thermal conductivity test board for leaded surface-mount packages.
4. Do not exceed P_D under any circumstances.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Max.	Unit
$V_{B1,2,3}$	High-Side Floating Supply Voltage	$V_{S1,2,3}$+10	$V_{S1,2,3}$+20	V
$V_{S1,2,3}$	High-Side Floating Supply Offset Voltage	6-V_{DD}	600	V
V_{DD}	Low-Side and Logic Fixed Supply Voltage	10	20	V
$V_{HO1,2,3}$	High-Side Output Voltage	$V_{S1,2,3}$	$V_{B1,2,3}$	V
$V_{LO1,2,3}$	Low-Side Output Voltage	COM	V_{DD}	V
V_{FO}	Fault Output Voltage ($\overline{FO}$)	COM	V_{DD}	V
V_{CS}	Current-Sense Pin Input Voltage	COM	5	V
V_{IN}	Logic Input Voltage (HIN1,2,3 and LIN1,2,3)	COM	5	V

R_{DSFO}	Fault Output On Resistance	I_{FO}=1.5 mA	90	130	170	Ω

Note:
5. These parameters are guaranteed by design.

Dynamic Electrical Characteristics

T_A=25°C, V_{BIAS} (V_{DD}, $V_{BS1,2,3}$) = 15.0 V, $V_{S1,2,3}$ = COM, C_{RCIN}=2 nF, and C_{Load} = 1000 pF unless otherwise specified.

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Unit
t_{ON}	Turn-On Propagation Delay	$V_{LIN1,2,3}$=$V_{HIN1,2,3}$=0 V, $V_{S1,2,3}$=0 V	350	500	650	ns
t_{OFF}	Turn-Off Propagation Delay	$V_{LIN1,2,3}$=$V_{HIN1,2,3}$=5 V, $V_{S1,2,3}$=0 V	350	500	650	ns
t_R	Turn-On Rise Time	$V_{LIN1,2,3}$=$V_{HIN1,2,3}$=0 V	20	50	100	ns
t_F	Turn-Off Fall Time	$V_{LIN1,2,3}$=$V_{HIN1,2,3}$=5 V	10	30	80	ns
t_{EN}	Enable LOW to Output Shutdown Delay		400	500	600	ns
t_{CSBLT}	CS Pin Leading-Edge Blanking Time(6)		200	300	400	ns
t_{CSFO}	Time from CS Triggering to $\overline{FO}$(7)	From V_{CSC}=1V to $\overline{FO}$ Turn-Off		630		ns
t_{CSOFF}	Time from CS Triggering to All Gate Outputs Turn-Off(7)	From V_{CSC}=1V to Starting Gate Turn-Off		640		ns
t_{FLTIN}	Input Filtering Time(8) (HINx, LINx, EN)		200	250	300	ns
t_{FLTCLR}	Fault-Clear Time			1.3		ms
DT	Dead Time		250	300	350	ns
MDT	Dead-Time Matching (All Six Channels)				50	ns
MT	Delay Matching (All Six Channels)				50	ns
PM	Output Pulse-Width Matching(6,9)	PW_{IN} > 1µs		50	100	ns

Notes:
6. These parameters are guaranteed by design.
7. These parameters are referenced to specified C_{RCIN}(=2 nF), and proportional to value of C_{RCIN} as shown in Figure 43. It is strongly recommended that the capacitor on R_{CIN} pin should be less than 5 nF.
8. The minimum width of the input pulse should exceed 500 ns to ensure the filtering time of the input filter is exceeded.
9. PM is defined as PW_{IN}-PW_{OUT}.

Switching Time Definitions

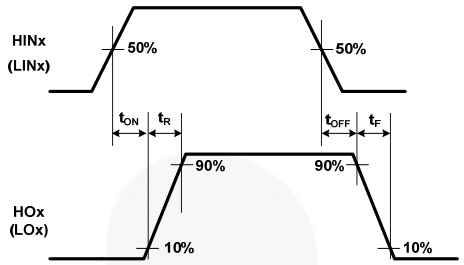

Figure 34. Switching Time Waveform Definitions

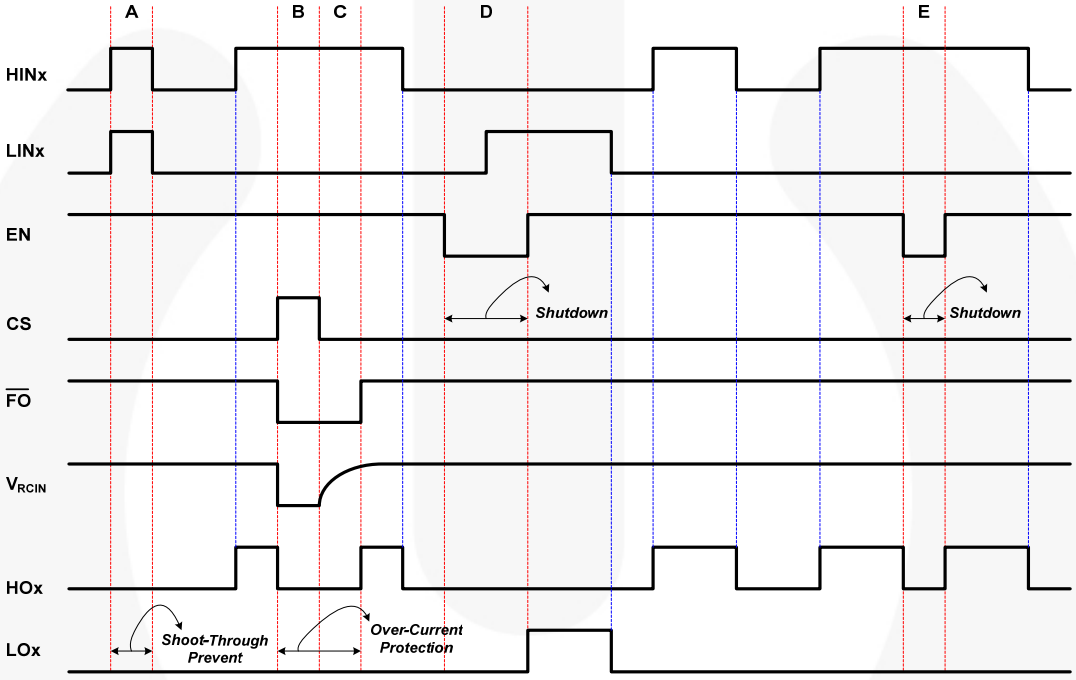

Figure 35. Input / Output Timing Diagram

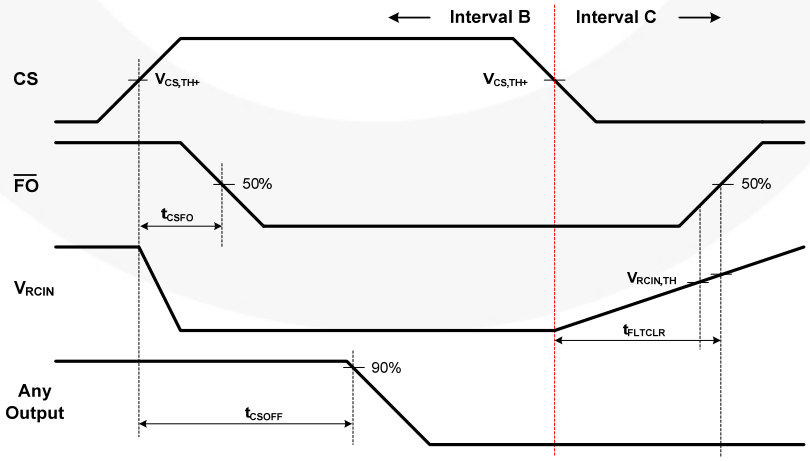

Figure 36. Detailed View of B and C Intervals During Over-Current Protection

Applications Information

1. Dead Time

Dead time is automatically inserted whenever the dead time of the external two input signals (between HINx and LINx signals) is shorter than internal fixed dead times (DT1 and DT2). Otherwise, external dead times larger than internal dead times are not modified by the gate driver and internal dead-time waveform definition is shown in Figure 37.

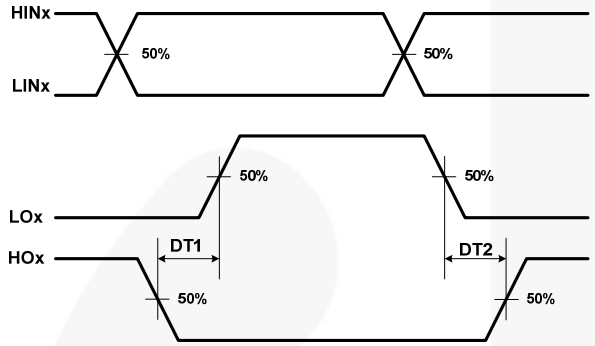

Figure 37. Internal Dead-Time Definitions

2. Protection Function

2.1 Fault Out ($\overline{FO}$) and Under-Voltage Lockout

The high- and low-side drivers include under-voltage lockout (UVLO) protection circuitry that monitors the supply voltage for V_{DD} and V_{BS} independently. It can be designed to prevent malfunction when V_{DD} and V_{BS} are lower than the specified threshold voltage. Also, the UVLO hysteresis prevents chattering during power-supply transitions. Moreover, the fault signal ($\overline{FO}$) goes to LOW state to operate reliably during power-on events, when the power supply (V_{DD}) is below the under-voltage lockout high threshold voltage for the circuit (during $t_1 \sim t_2$). The UVLO circuit is not otherwise activated; shown Figure 38.

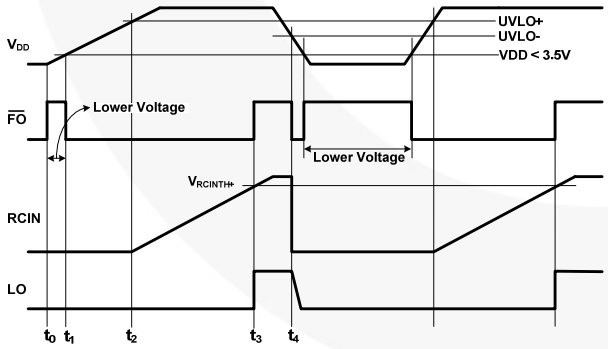

Figure 38. Waveforms for Under-Voltage Lockout

2.2 Shoot-Through Protection

The shoot-through protection circuitry prevents both high- and low-side switches from conducting at the same time, as shown Figure 39.

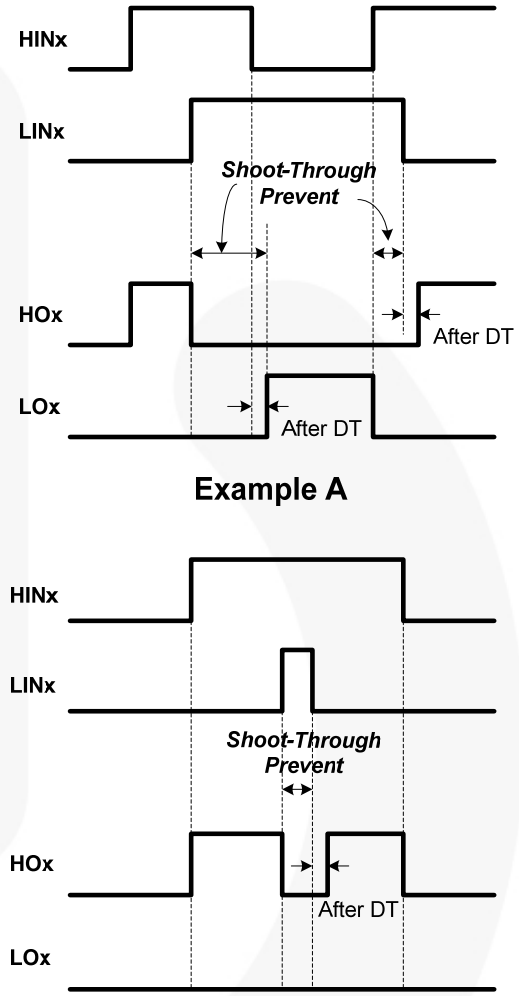

Figure 39. Shoot-Through Protection

2.3 Enable Input

When the EN pin is in HIGH state, the gate driver operates normally. When a condition occurs that should shut down the gate driver, the EN pin should be LOW. The enable circuitry has an input filter; the minimum input duration is specified by t_{FLTIN} (typically 250 ns).

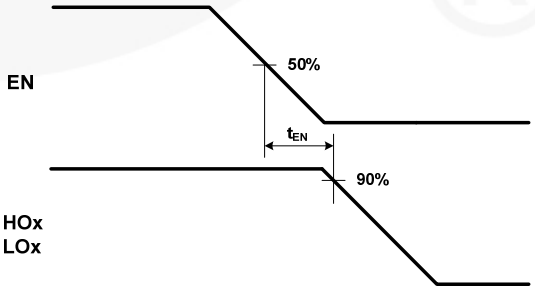

Figure 40. Output Enable Timing Waveform

2.4 Fault-Out ($\overline{FO}$) and Over-Current Protection

FAN7389 provides an integrated fault output ($\overline{FO}$) and an adjustable fault-clear timer (t_{FLTCLR}). There are two situations that cause the gate driver to report a fault via the FO pin. The first is an under-voltage condition of low-side gate driver supply voltage (V_{DD}) and the second is when the current-sense pin (CS) recognizes a fault. Once the fault condition occurs, the $\overline{FO}$ pin is internally pulled to COM, the fault-clear timer is activated, and all outputs (HO1,2,3 and LO1,2,3) of the gate driver are turned off. The fault output stays LOW until the fault condition has been removed and the fault-clear timer expires. Once the fault-clear timer expires, the voltage on the FO pin returns to pull-up voltage.

The fault-clear time (t_{FLTCLR}) is determined by an internal current source (I_{RCIN}=5 μA) and an external C_{RCIN} at the RCIN pin, as shown in this equation:

$$t_{FLTCLR} = \frac{C_{RCIN} \times V_{RCIN,TH}}{I_{RCIN}} [s] \quad (1)$$

The R_{DSRCIN} of the MOSFET is a characteristic discharge curve with respect to the external capacitor C_{RCIN}. The time constant is defined by the external capacitor C_{RCIN} and the R_{DSRCIN} of the MOSFET.

The output of current-sense comparator (CS_COMP) passes a noise filter, which inhibits an over-current shutdown caused by parasitic voltage spikes of V_{CS}.

This corresponds to a voltage level at the comparator of V_{CSTH+} - V_{CSHYS}= 500 mV - 60 mV =440 mV, where V_{CSHYS}=60 mV is the hysteresis of the current comparator (CS_COMP) as shown in Figure 41.

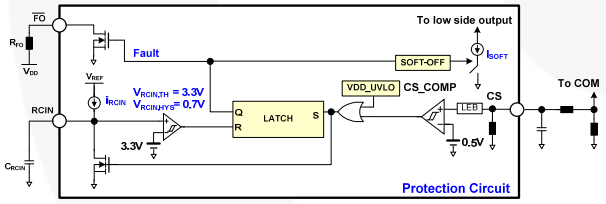

Figure 41. Over-Current Protection

Figure 42 shows the waveform definitions of RCIN, $\overline{FO}$ and the low-side driver, which uses a soft turn-off method when an under-voltage condition of the low-side gate driver supply voltage (V_{DD}) or the current-sense pin (CS) recognizes a fault. Once a fault condition occurs, the $\overline{FO}$ pin is internally pulled to COM and all outputs (HO1,2,3 and LO1,2,3) of the gate driver are turned off. Low-side outputs decline linearly by the internal sink current source (I_{SOFT}=40 mA) for soft turn-off, as shown in Figure 42.

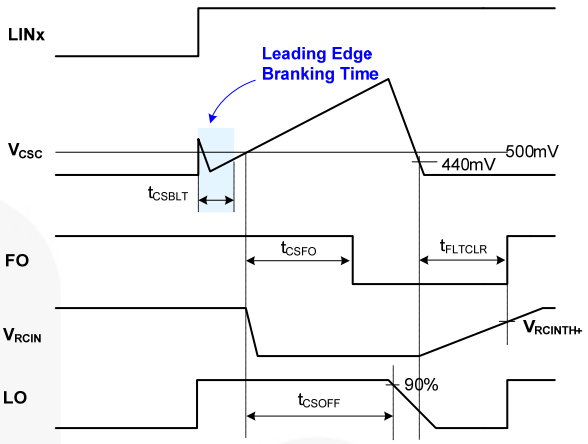

Figure 42. R_{CIN} and Fault-Clear Waveform Definition

2.5 Recommended R_{CIN}

Figure 43 shows timing of t_{CSOFF} and t_{CSFO} versus C_{RCIN}.

It is strongly recommended that the capacitor on R_{CIN} pin should be less than 5 nF in order to properly protect power devices in over-current situations.

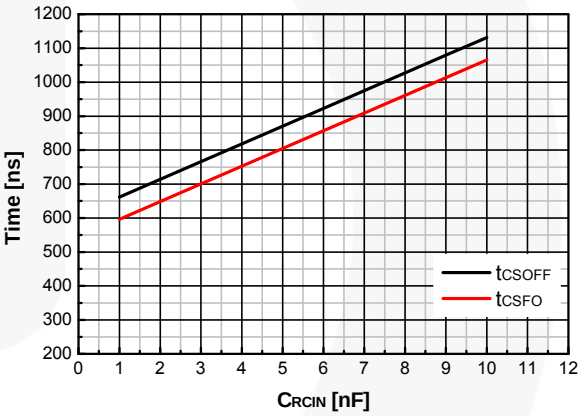

Figure 43. Timing of t_{CSOFF} and t_{CSFO} vs. C_{RCIN}

3. Noise Filter

3.1 Input Noise Filter

Figure 44 shows the input noise filter method, which has symmetry duration between the input signal (t_{INPUT}) and the output signal (t_{OUTPUT}) and helps to reject noise spikes and short pulses. This input filter is applied to the HINx, LINx, and EN inputs. The upper pair of waveforms (Example A) shows an input signal duration (t_{INPUT}) much longer than input filter time (t_{FLTIN}); it is approximately the same duration between the input signal time (t_{INPUT}) and the output signal time (t_{OUTPUT}). The lower pair of waveforms (Example B) shows an input signal time (t_{INPUT}) slightly longer than input filter time (t_{FLTIN}); it is approximately the same duration between input signal time (t_{INPUT}) and the output signal time (t_{OUTPUT}).

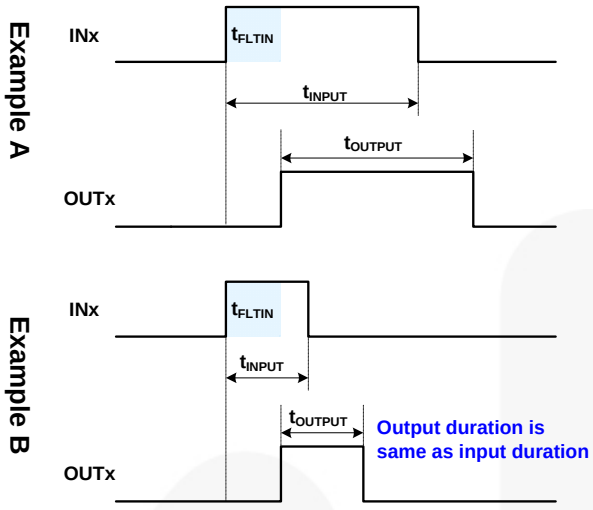

Figure 44. Input Noise Filter Definition

3.2. Short-Pulsed Input Noise Rejection Method

The input filter circuitry provides protection against short-pulsed input signals (HINx, LINx, and EN) on the input signal lines by applied noise signal.

If the input signal duration is less than input filter time (t_{FLTIN}), the output does not change states.

Example A and B of the Figure 45 show the input and output waveforms with short-pulsed noise spikes with a duration less than input filter time; the output does not change states.

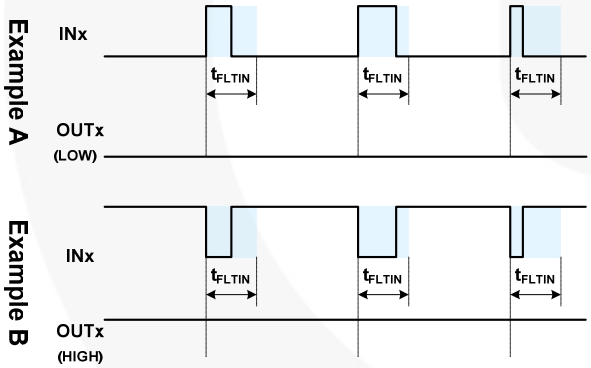

Figure 45. Noise Rejecting Input Filter Definition

Figure 46 shows the characteristics of the input filters while receiving narrow ON and OFF pulses. If input signal pulse duration, PW_{IN}, is less than input filter time, t_{FLTIN}; the output pulse, PW_{OUT}, is zero. The input signal is rejected by input filter. Once the input signal pulse duration, PW_{IN}, exceeds input filter time, t_{FLTIN}, the output pulse durations, PW_{OUT}, matches the input pulse durations, PW_{IN}. FAN7389 input filter time, $t_{FLTIN,}$ is about 250 ns for the high- and low-side outputs.

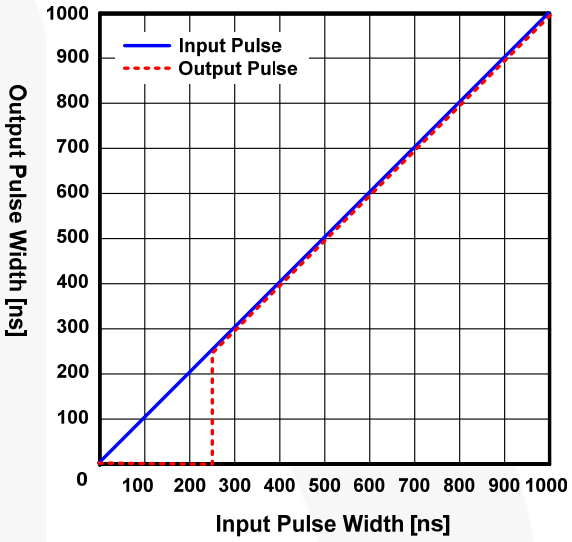

Figure 46. Input Filter Characteristic of Narrow ON

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.

Rev. I63
